

IT MAY LOOK CUTE BUT IT'S NOT SAFE

KNOW MORE **about sibling sleep** **and your baby**

The safest place for baby to sleep is in a cot in your room for at least the first 6 months

NEVER let your children share beds with their baby brother or sister. Young children can easily roll on top of their baby brother or sister and suffocate them.

Local babies have died this way.

Keeping babies safer in the Black Country designed and developed by Dudley Council Public Health endorsed by Black Country CDOP
